

The key to a superior finished product is the quality of art that is submitted

Quality graphic art files are the first requirement for a high quality printed dry erase board.

Vector Files

We work with Adobe Illustrator which uses vector files. These are the best quality files to send, because the files are scalable without losses to quality. Their extensions are eps or ai. When sending vector files, please set all your fonts to outlines/curves before submitting them to us. This will convert the text to a graphic, ensuring that your fonts look like the font you selected. Our designers may not have your specific chosen font.

You can submit a pdf file, but these files may contain non-vector elements that could cause poor quality problems. Our graphics team can evaluate the files and will inform you of any issues.

Photographs or Rasterized Images

All photographs are bitmaps, their quality and the ability to enlarge them depends on their resolution. The only way to know if the image will look good at the printed size is to process it in an imaging program such as Photoshop. We will be happy to evaluate any image you send. We just need to know the final size of the printed board.

We print photos as received without color management. The photos must be sized in the final print size PLUS 1" larger on all 4 sides ladd 2" to the overall width & height.
